**Certification of mateenbar GFRP rebar to CSA S807**

Dear Mr. Billey,

I am writing this note at the request of Rob Fordyce, General Manager, Pultron Composites Ltd. about the characteristics of Mateenbars manufactured by their company.

I have been involved in the testing of these bars and evaluating the test data from various independent sources for several years and can confirm that Mateenbars meet or exceed the requirements for certification to the **CSA S807-10 Specification for fibre-reinforced polymers** standard as a Grade III, Durability D1 GFRP rebars.

I have personally audited the Dubai mateenbar manufacturing plant and independent testing facilities on a number of occasions. I can confirm that all the required tests have been carried out in accordance with the applicable codes mentioned in CSA S807 and the data analysed correctly.

Best regards.

Sincerely,

Shamim A. Sheikh, Ph.D., P.Eng., FCAE.
